UI-Re-Design Assignment

UI-Re-Design Assignment

I did not receive any feedback for my User-Interface portion. I was told that my UI design fits the specifications of my application. I have attached what I have completed for the UI as of this moment. As someone who does not consider themselves as a UI designer, I struggle with mixing colors in a way that's vibrant. For this project I wanted to create a funky modern vibe to the site that had an array of assorted colors that meshed and gelled together. I have to do some more things to tie everything in together but so far, I like the direction this design is headed in. I may have to ease up on some of the colors if it overpowers the user.
